Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2 and 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 6,600,509 to Radford et al. (Radford).

With respect to claims 1, 2, 14 and 15, Radford discloses a counting system for counting the number of passing objects (i.e. a person or persons) in a path, comprising: a light emitter for irradiating a plurality of lines that extend along a width direction of said path and provided at intervals, respectively, with a plurality of rays; an image capturing part for photographing said plurality of lines to obtain images; a line data generator for generating a plurality of pieces of one-dimensional line data each indicative of an irradiation state of each of said slit rays on said plurality of lines, respectively, from images obtained by said image capturing part; and a counter for determining travel directions of said passing objects on the basis of said plurality of pieces of line data, and counting said number of said passing objects in each of the travel directions of said passing objects. Though from the drawings it would appear that the slit rays of light projected as a plurality of lines of light, Radford is silent as to slit rays of light, however, it would have been obvious for one of ordinary skill of the art to provide slit rays of light

as a means of more accurately monitoring the zones for interruptions by objects, regardless of the size.

With respect to claims 16 and 7, the method of counting the number of passing objects is inherent to the system claimed above.

Allowable Subject Matter

Claims 3-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
